Name of the Guide		Dr. Neelima Gogineni

Abstract

Abstract

The **AI-Powered Attendance Management System using Intelligent Automation and Real-Time Analytics** is a smart and efficient solution designed to simplify the process of recording, managing, and monitoring attendance. Traditional attendance systems often require manual work, which can be time-consuming and may lead to errors or inaccurate records. This system uses modern technologies and artificial intelligence to automate attendance tracking and improve accuracy.

The system allows students or employees to record their attendance through digital methods such as **QR code scanning or face recognition**. Administrators and teachers can securely manage attendance records, view real-time attendance status, and generate reports. AI-based analytics can identify attendance patterns and provide useful insights, such as frequent absences or low attendance rates. The system also provides a centralized platform for storing and accessing attendance information securely.

Overall, the proposed system reduces manual effort, improves attendance accuracy, saves time, and provides real-time insights, making attendance management more **automated, reliable, and user-friendly**.
